Sequence 44, Application US/08306063
Patent No. 563445
GENERAL INFORMATION:
APPLICANT: Barry, Gerard F.
APPLICANT: Rishore, Ganesh M.
APPLICANT: Padgette, Stephen R.
APPLICANT: Stallings, William C.
TITLE OF INVENTION: Glyphosate Tolerant
TITLE OF INVENTION: 5-Enolpyruvylshikimate-3-Phosphate Synthases
NUMBER OF SEQUENCES: 69
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 43 YKPLLGEDCRRIMDIFRHLGVEIKEDDEKLVVIS-PGYQVNIPHQVLYIGNSGTITRLLA 101

Mean 49.482; Variance 97.811; scale 0.506 Statistics: Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

It catalyzes the condensation of oxaloacetate and acetyl-coA to form citrate in the tricarboxylic acid cycle.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          mitochondrion of eukaryote cells. This molecule is a dimer of identical chains. Each dimer binds two
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             molecules of acetyl-CoA and two molecules of oxaloacetate at two

mature protein; sequence, including the amino end of the
mature protein, was confirmed by protein sequencing

T This protein is involved in oral morphogenesis preceding binary
fission, and in nuclear events during fertilization, such as
formation of gametic pronuclei and zygote formation of gametic

pronuclei. It also acts as a mitochondrial enzyme, citrate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Numata, O.; Takemasa, T.; Takagi, I.; Hirono, M.; Hirano,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          62 EGIPFPGFSIPECOKLLP-A-A-SAG-A--EPLPEGLLWLLLTGKVPSKEQVDALSADLP 115

Donald, L.J.; Molgat, G.F.; Duckworth, H.W.
J. Bacteriol. (1989) 171:5542-5550
Cloning, sequencing, and:5542-5550
Cloning, sequencing, and expression of the gene for
NADH-sensitive citrate synthase of Pseudomonas aeruginosa.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   citrate (si)-synthase (EC 4.1.3.7) - Pseudomonas aeruginosa #formal_name Pseudomonas aeruginosa 30-Sep-1992 #sequence_revision 30-Sep-1992 #text_change 17-Jul-1998
